

This side of the NDEP data Mapper has all the tools to navigate, query, identify and print maps. If you move the arrow over each button, a tip will show what the function of each button is. The Default is set to zoom in, and if you click on the map it will keep zooming in. I will try to do a quick definition of the main buttons.

Click on legend and you get a web page that represents the layers on the other side.

Click on the layer and an explanation of the symbols will come up.

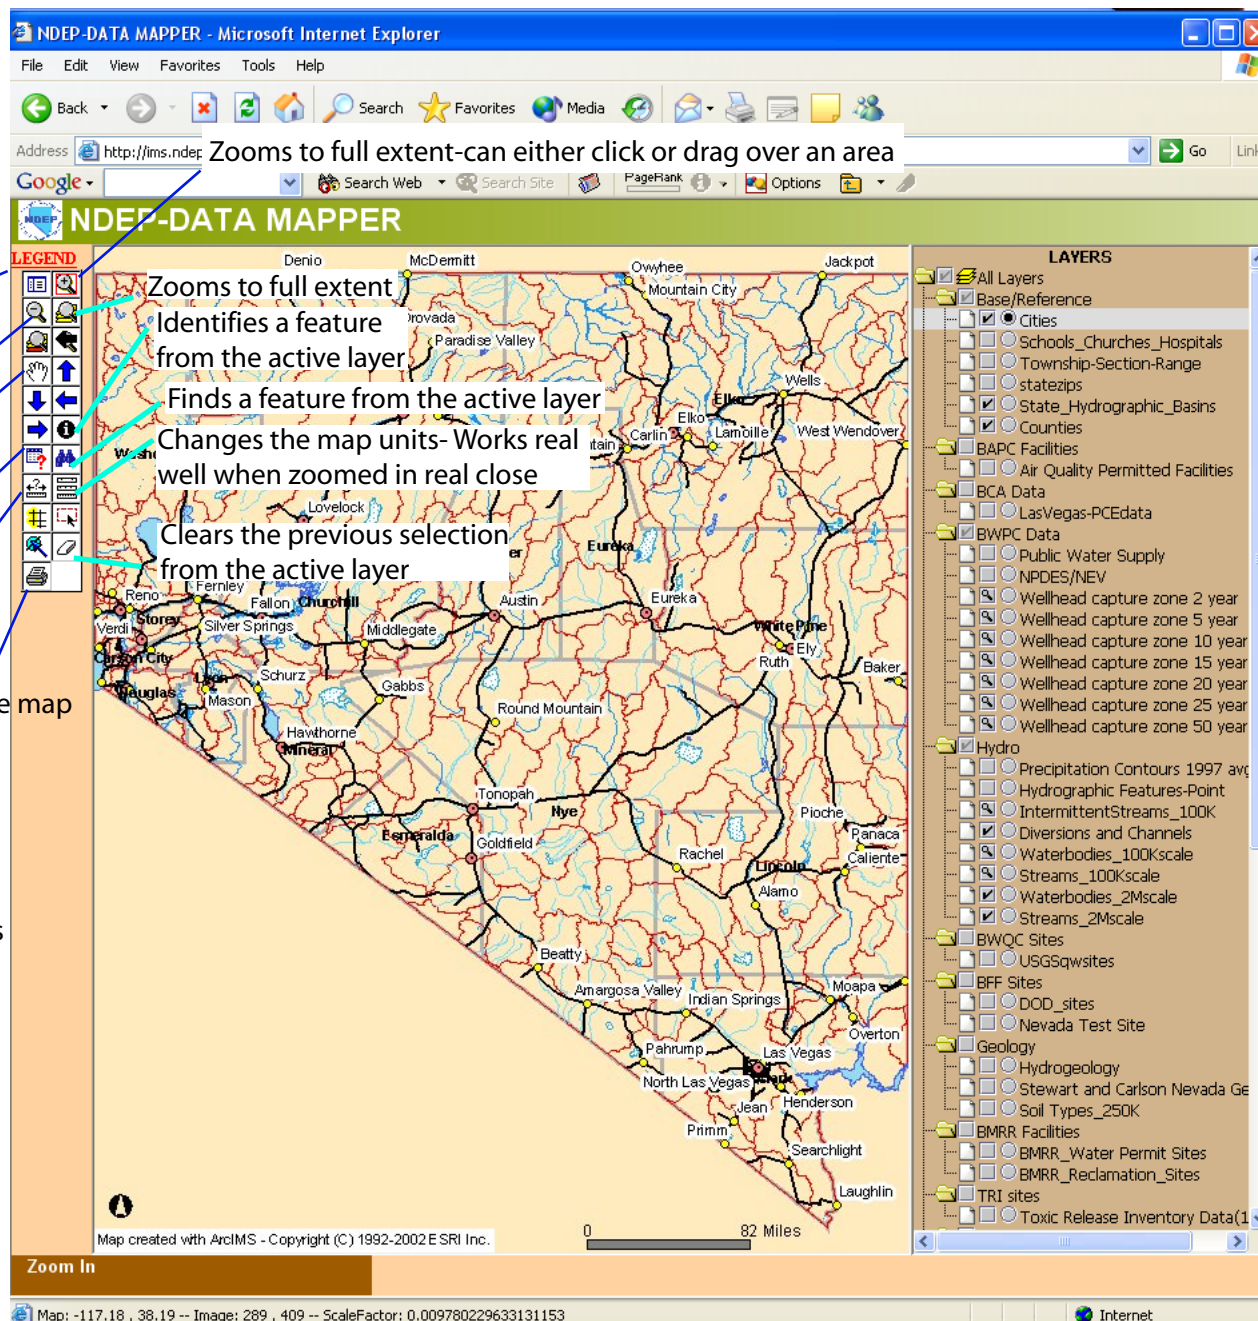

Build Queries based on active layers attributes

Measures distance between points in the map units that are set

Zooms Out

Pan across the screen

Prints the map

This side is known as the Table of Contents. This lists all the layers available. There is a description of the different boxes and symbols on the bottom of the page. The folders open and close, just like in windows explorer. Some data will only show at certain scales
